

A male cyclist is shown from the chest up, wearing a grey and white cycling jersey and a white helmet. The jersey has a black zipper and a small purple diamond logo on the chest. The helmet has 'LIMAR' written on the sides. The cyclist is wearing large, reflective sunglasses. The background is a blurred outdoor setting with wooden structures. The word 'LIMAR' is overlaid in large, white, italicized letters across the center of the image.

LIMAR

STAGE 21

NEW

AIR KING EVO

VENTILATION SYSTEM

For the best aerodynamic performance, air flow that impacts on the helmet must be tamed by guiding it both externally to maintain high aerodynamic performance, and internally to offer thermal comfort to the athlete. The air that enters must cool the head and convey body heat outside. Front air vents, the internal air channel system and the rear hole of Air King evo make an excellent internal ventilation system, while the external lines and shape control the air flows, preventing the formation of turbulence.

INTEGRATED VISOR

Every detail of Air King Evo is designed to meet high requests of the most demanding cyclists and hardest competitions. The polycarbonate visor fits perfectly into the helmet design, SECURELY HOLD BY INSTANTANEOUS MAGNETIC GRIP with ANTI FOG AIR FLOW SYSTEM.

PRICE	349,95 €
TECHNOLOGY	High performing EPS/PC shell

AIR PRO

IMPROVING AIR CIRCULATION

The transversal wings, thanks to the use of carbon, have a reduced thickness. This allows easy inflow and improved air circulation inside the shell resulting in great benefits to aerodynamics and ventilation.

SMOOTHING THE AIR

The pyramidal surface of the longitudinal ribs reduces the impact pressure, cutting the air and allowing a smooth sliding.

PREVENTING VORTEX

The extended tail to the Air Pro decreases the resistance to the air allowing a gradual detachment and preventing turbulence.

PRICE	259,95 € + Mips 299,95 €

In LIMAR we talk about performance, not just aerodynamics.

Ventilation is essential for the rider's performance.

With Air Atlas, ventilation is guaranteed by specific air intakes that allow a large amount of air to blow fast through the internal channels, cooling the rider's head, and by Venturi effect to come out at the back, rejoining the flow that runs along the external surface of the helmet, free from obstacles: no vortex, no turbulence, just pure speed.

Every single component of Air Atlas has been carefully designed for comfort: the brand new Air Fit Evo adjustment system, integrated with a more comfortable strap, the new divider, minimal and ergonomic, perfectly adherent to the rider face, the Fidlock magnetic buckle. The most comfortable set up is finally completed by a pad system, carefully designed to optimize ventilation and comfort.

In Limar lightness is a primary feature.

Like for the other Air Revolution helmets, the weight of Air Atlas is extremely limited: only 220 grams (size Small)

Limar Air Atlas helps you improve your performance: excellent aerodynamic, extreme lightness, top ventilation and super comfort.

The fastest and most ventilated helmet in the space has arrived!

COMFORT

The Air Fit Evo size adjustment system allows to get the best comfort of the helmet through its multi-level multi-directional adjustment.

The Fidlock magnetic closure system lets you unfasten the chin strap quickly even when wearing gloves.

The temporomandibular area is also protected by pads set available in different thicknesses, easily removable when needed (in case of an accident this is particularly important), The large peak is adjustable in 3 positions and compatible with goggles.

LIGHTNESS AND VENTILATION

A value of all Limar helmets, the lightness factor is the heart of every project.

The goal of total protection is always a priority; however, our goal is to offer the lightest and most comfortable product. **Livigno weighs only 590 gr in size M.**

The ventilation system allows air to circulate freely inside the shell: it is guided through the front holes by its system of internal channels, refreshing the head and maintaining an ideal temperature.

PRICE 249,95 €

TECHNOLOGY All around In-mould double shell - ABS-EPP chin guard - ABS visor

ETNA

Mips

NEW IN

Whether you are an Enduro enthusiast or a new generation trail rider, if you are looking for breathtaking experiences in total safety, on forest trails as well as in dirt jump parks, you cannot do without Etna. Etna is the new entry of the Limar Evolution collection, designed for those who love technical rides combined with adrenaline-pumping adventures and pure fun. What could be better than a day surrounded by extraordinary landscapes, exploring highly technical trails, climbs and descents, perhaps in the company of your friends and those who share your passion?

Etna has been developed to meet all the comfort and protection needs that a dirt biker is looking for: the fit is perfect, the helmet doesn't move, it's ultra-light, so to forget you have it on your head.

The **MIPS Node System**, with soft and large internal padding, offers total comfort and safety. The release is by magnetic FidLock, you can fasten and unfasten the helmet just with one hand.

The ventilation system is designed to allow air to circulate freely inside, while keeping the head cool at all times.

The most innovative element is though the **PROXEAR®** coverage system, designed to extend protection to the ears and the temporomandibular joint. You will feel wrapped in exceptional comfort, safe from accidental blows or crashes, totally protected in the event of a fall.

TONALE

NEW IN

TONALE, the new LIMAR helmet with an unmistakable name. Your helmet if you love adventure, if you are adventure, when you want to feel protected and safe, while fully experiencing the emotions of those days spent in the mountains and nature. Ideal for All Mountain and Enduro.

Tonale is much more than just a safe helmet. Its shell with extended coverage onto the temples and nape, is designed to offer unrivalled comfort, a carefully designed ventilation system keeps your head cool at all times, a double direction retention system and finally the integrated, wide and adjustable visor.

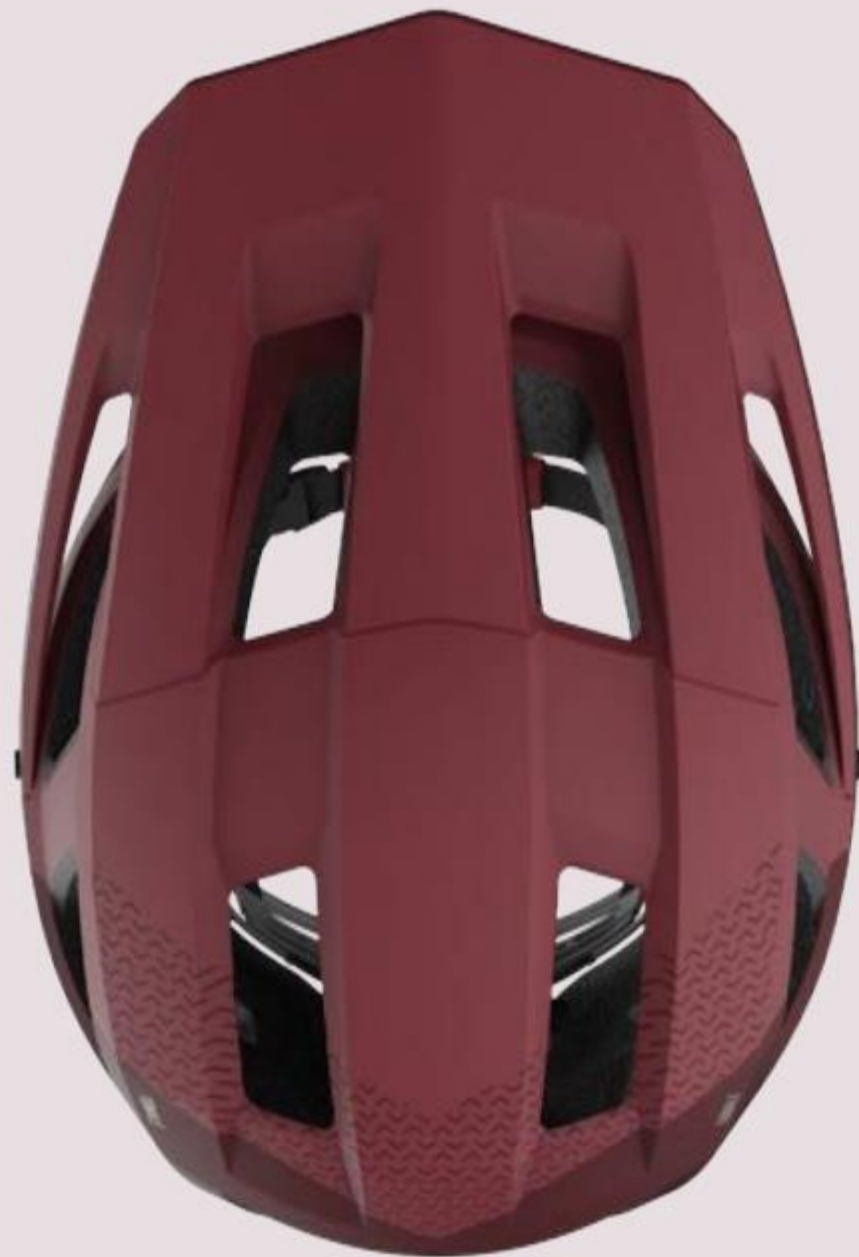

Air Fit Evo adjustment system, fully wrapping the occipital area, ensures the optimal fit of Tonale, you forget you are wearing a helmet.

The ventilation system allows the air to circulate freely inside the shell: through the front vents the air is guided along the internal channels system, cooling the head while keeping an ideal temperature.

The large visor is perfectly integrated into the helmet for an elegant and aggressive style. It is adjustable to allow your goggles to rest on the helmet when you are not wearing them.

So here it is, suitable for any path and every biker style, complying with all certifications for acoustic or e-bikes. Lightweight like no other in this category, with only 310 grams in size M.

EXPLORE YOUR SURROUNDING BEAUTY

With its casual and vaguely retro inspiration, this new full-frame model has a linear design particularly directed to the gravel world, even if suitable for every cycling category and discipline. The large mono-lens allows greater peripheral vision, acting as a real windshield to protect the eyes from sun, wind, dust, insects and much more.

While offering great stability thanks to the fully adjustable nose piece and tips, it has a Grilamid TR90 frame, light and ultra-resistant, biologically compatible and safe in contact with the skin, even for very prolonged use.

The air flow ventilation system allows air to circulate free while preventing fogging of the lens.
